IntraActive
Governance

Set the right environment for collaboration

Microsoft Teams makes it easier than ever before to collaborate virtually in an organization and across organizations. With an application like Microsoft Teams, with tons of features and continued updates, you need a tool to take control. IntraActive Governance ensures that Microsoft Teams is used in a structured way in your organization and helps you get the full potential of Microsoft Teams for collaboration. IntraActive Governance is partly a self service app for the end user and partly a governance portal app for the IT responsible and helpdesk.

Easy and organized collaboration
IntraActive Governance eliminates bottle necks and provides the end user with an app in Microsoft Teams, that guides them through Teams creation. With a userfriendly interface the end users can quickly get an overview of theirs and the organization's teams.

Security, management and governance
Control the creation of teams with business specific templates that ensure that policies, security and governance for your projects and collaborative spaces are adhered to. Avoid "teams sprawl" with life cycle management of your teams along with a governance portal that provides a governance overview for those in responsible.

Key features

Templates
Automated creation of teams based on templates with pre-defined policies, settings and content

Adoption and learning
Integration to courses that ensure adoption of Microsoft Teams

Classification
Find teams quicker by using tags and classification

Approval
Control the use of teams with required approval

End user app
Give the end user a clear overview of the teams they own and are responible for

Governance portal app
Give the IT manager an overview of the teams that require attention and action

We were quick to see the value of IntraActive Governance for taking control of our teams.

Thomas Petersson, IT Manager, EKJ
